acusend™ technology allows organisations to create, send and receive information in any document format, at any time and to any device. Personalised and automated, acusend™ makes the management of content creation and delivery simpler, allowing businesses to communicate more effectively.

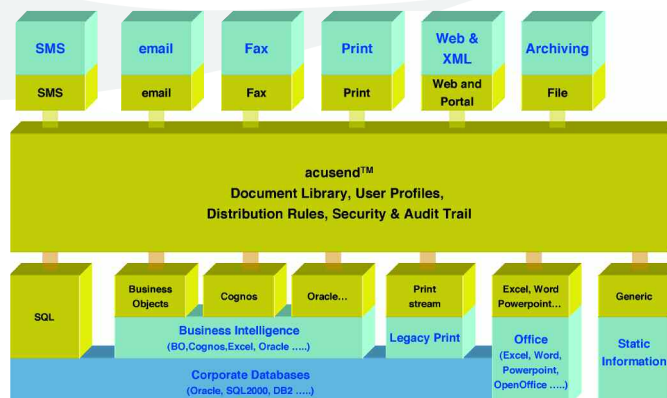

The acusend™ difference

acusend™ acts as the business engine and management tool behind all your information distribution needs. Based on innovative and sophisticated technology, acusend™ works across all major business intelligence products and document formats, intelligently personalising content into the required format, allowing users to access an endless variety of distribution media, including portals, email, fax, print and SMS. Content can be created for people on the move and many features can be rapidly adapted to suit businesses' precise distribution requirements. These include:

- Business intelligence automation.
- Immediate intranet and portal delivery.
- Secure intranet and extranet delivery.
- Office integration and automation.
- Email and SMS alerting.
- Sophisticated scheduling and event detection.
- Subscription services and re-query.
- Automatic optimisation and load sharing.
- Legacy print bursting and electronic delivery.
- Production print batching and collation.
- Full operational management features.
- Sophisticated API extensibility.

Operational Information Distribution

acusend™ has the flexibility to integrate and work with many other information generating products such as Oracle Reports, legacy print stream outputs and static documents. acusend™'s wide array of plug-ins allow businesses to drive more value out of existing technologies by controlling and developing the content while also maintaining operational continuity. By centralising the control of document distribution acusend™ allows businesses to exploit their data, rapidly repurposing the information and managing its intelligent distribution.

The object-oriented design of acusend™ facilitates the rapid integration of any document type, format and destination channel.
