Service Offering

SAP BusinessObjects

Saksoft
implemented SAP
BusinessObjects to
significantly improve
operational
efficiency

Business Challenge

The Client was using a traditional ERP system for data management and report generation. It was used for report generation, analytics and proper quantification of information flow and management. However, the existing process flow was time consuming and lacked a few latest parameters. This prompted the Client to seek for a solution that resolves the issues and provides better output.

Business Solution

Saksoft thoroughly studied the Client's situation and proposed SAP BusinessObjects as a presentation tool for data consolidation and analytics. This created an organised, accurate data and enabled the client to perform in-depth and customised analytics. The reports generated were made available to all the users. The improved system significantly saved employee time, reduced manual intervention and improved operational efficiency. Proper training sessions were conducted periodically to ensure proper knowledge transfer to the Client's internal team.

Business Benefits

- Organised data management, smooth process flow and in-depth analytics
- Operational efficiency increased by 30% due to better insights and faster decision making
- Saved 35% of employee time by reducing manual report generation
